In linguistics, syntax (/ ˈɛː s ɛː n t ˈiː k s /) is the set of rules, principles, and processes that govern the structure of sentences in a given language, usually including word order. The term syntax is also used to refer to the study of such principles and processes. The goal of many syntacticians is to discover the syntactic rules common to all languages.. In mathematics, syntax refers to ...

Dependency grammar (DG) is a class of modern grammatical theories that are all based on the dependency relation (as opposed to the constituency relation) and that can be traced back primarily to the work of Lucien Tesnière. Dependency is the notion that linguistic units, e.g. words, are connected to each other by directed links. The (finite) verb is taken to be the structural center of clause ...

Historical linguistics: the study of language change 253 Another example of hypercorrection is the use of I in constructions such as He saw John and I. This usage is an overgeneralization of the rule that only I should be used in subject position, never me. According to this rule, John and I are going is correct but John and me/Me and John are going is incorrect.
